Raw data files
IMU streams, native units
probes read the data
Documentation
README, landing page, paper PDF
1 Grounded extraction
4-bit open LLM, retrieval, JSON schema
2 Signal verification
rate: timestamps
unit: |gravity|
labels, IDs: files
Harmonisation record
units, rate, placements, label semantics
3 Compile
unit + rate normalisation, channel text, prototypes
4 Cross-data set encoder
channel-token transformer conditioned on channel text; zero/few-shot via prototypes
5 Causal measurement
M0 none, M1 generic, M2 extracted, M3 verified, M4 gold;
injected defects -> cost curves
